MRI Releases End of Harvest Report

03/28/2008

OGDEN, Utah—Mineral Resources International Inc. (MRI) announced the 2007 mineral harvest of its sister company, NorthShore Limited Partnership, is complete. The firms stated they focused the harvest on the most concentrated grade of ionic minerals, and netted sufficient reserve of its premium concentration to meet existing demand and meet growth projections.

According to Corey Anderson, managing partner of NorthShore, the overall harvest was moderate, but saw good growth and production of new products. Anderson added, "Even though NorthShore is beginning to transport the final yields of the 2007 harvest to MRI, it is by no means complete. MRI has already begun its usual sequence of purity and potency testing at its laboratory, which will be followed up with testing conducted at outside, independent labs."
